Application for: Senior Solutions Architect, Nordics Hunter Team, Databricks

Dear Databricks Hiring Team,

I'm excited to apply for the Senior Solutions Architect role on your Nordics Hunter team. The mission of establishing Databricks as the data and AI platform on greenfield accounts is exactly the kind of high-stakes, zero-to-one work I love: bringing structure to ambiguity, earning trust at the executive level, and proving value the business can measure.

Over the last decade I've worked at the intersection of data, AI, and cloud architecture, mostly in client-facing and strategic roles. At H&M I lead cloud and AI platform initiatives for 200+ teams, including multi-model orchestration, RAG, and agentic AI on Microsoft Foundry and Vertex AI, while driving a 35% cloud cost reduction through FinOps and analytics on Fabric. At Ikano Bank, I advised a financial-services client through a serverless data migration, including an LLM-powered autonomous agent that cut delivery time by 60% and latency by 70%. Across both, my focus was the same: move past proof-of-concept to outcomes that stick.

What draws me to this role is the AI-Builder mindset. I don't just advise on architectures, I build them, ship open-source AI tooling, and stay hands-on with the latest models and patterns. I'm comfortable influencing VP+ stakeholders through high-tension decisions, abstracting my work into reusable patterns, and coaching fellow architects to keep standards high at speed.

Based in Stockholm and deeply familiar with the Nordics, I'd welcome the chance to help your most strategic customers reason through their data and AI journey on Databricks.

Thank you for your consideration.

Warm regards,

Ankit Raj
