

Ankit Raj

Senior Technical Engineer - GISC

Stockholm, Sweden | ankit.raj@hm.com | github.com/ankit-raj_hmgroup

Application for: Lead Platform Engineer, GISC, H&M Group (Stockholm)

Dear Hiring Manager,

I'm applying for the Lead Platform Engineer role because it's the natural next step in a journey I'm already deeply invested in. I currently work within this team as a Senior Technical Engineer, so I know our hosting platforms, our people, and the challenges ahead firsthand, from driving the shift to cloud-native and containerised platforms to leading cloud observability across Mozart, Google Cloud, and Azure on Microsoft Fabric.

Over the past years at H&M I've built and operated platforms at real scale: HAPI integration infrastructure on Azure API Management handling 2 billion+ requests during peak sales, a multi-million SEK FinOps programme cutting cloud spend by 35%, and self-service developer platforms that reduced onboarding from days to minutes. I work hands-on across Kubernetes, Terraform, and CI/CD, and I care as much about secure-by-design and compliance (PCI-DSS, GDPR, ISO 27001) as I do about developer experience and cost.

Alongside the engineering, I've been mentoring engineers and helping new PMs understand our product lifecycle, which is exactly the kind of technical leadership this role calls for. I enjoy turning architectural vision into working services, aligning hosting strategy with our business, digital, and sustainability goals, and raising the bar for the whole team.

I'm ready to grow from senior contributor into a leadership role within a team and product I already care about, and I'd be genuinely excited to help shape the next stage of our hosting platforms. Thank you for your consideration.

Warm regards,

Ankit Raj
